DETAILED ACTION

1. The amendment filed on 1/13/2010 has been entered.

Election/Restrictions

2. Claim 33 is allowable. The restriction requirement, as set forth in the Office action mailed on 4/4/2008, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 36 and 37, directed to the non-elected species, are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

3. Claims 33-34 and 36-37 are allowed.
4. The following is an examiner's statement of reasons for allowance: Claim 33 provides a substrate processing system with a plurality of modules in which a substrate

is transferred into and out of the module, a substrate transfer mechanism and a control section that controls the substrate transfer mechanism to transfer a first lot and a second lot with a first transfer flow and a second transfer flow, in which the two transfer flows are different from each other and the first lot of substrates are processed before the second lot of substrates, where the control section includes a first function of forming a two-dimensional transfer control table defined by a transfer flow axis and a time axis in which intersection points are cells and cells are correlated with substrate identification information to generate a first transfer schedule of the first lot and a second transfer schedule of the second lot, a second function of modifying the second transfer schedule such that the first cell group is recognized as a first figure and the second group is recognized as a second figure, and the second figure is shifted towards the first figure such that the second transfer schedule is within a range in which the second figure does not interfere with the first figure, and a third function of controlling the mechanism to transfer the first lot and the second lot in accordance with the first transfer schedule and the second transfer schedule. These limitations, in combination with the other limitations in the claims, were not found in the relevant prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
